

“Imagine” – The Role of AI in Reshaping Higher Education

This year's Education Lecture and Supper, will be taking place on Wednesday 19th of June 2024 at Bakers' Hall from 18:00 to 21:45 to discover how AI revolutionises learning and leadership, empowering us for the future.

We will be exploring the future of education and Generative AI, which is impacting us more quickly than any technological advance we have seen in recent years, and will have a dramatic effect on all education. The guest speaker is Dr Chris Dalton, Associate Professor of Management Learning at Henley Business School, who will present a lay practitioner's perspective on Generative AI in Higher Education. Drawing on examples from its use and experience in British universities, and with the field of management consultancy in mind, Chris will outline what Generative AI in education is, what the implications are of its adoption and use, the promise it might hold, as well as the pitfalls and dangers that must be considered.

As well as plenty of inspiring conversation around the dinner table, you and your guests will enjoy a delightful supper, accompanied by matched wines from our Company cellar. It will be a perfect blend of intellectual stimulation and culinary delight.

If you are interested please contact me at assistant.clerk@wcomc.org to book places.

Date: Wednesday 19th June 2024. Dress code is 'Business Attire' Cost is £97.00pp.
